**Sing San Yang, Lamberto G. Bentivoglio, Vladir Maranhão, Harry Goldberg : From Cardiac Catheterization to Hymodynamic Parameters** before purchasing it in order to gage whether or not it would be worth my time, and all praised From Cardiac Catheterization to Hymodynamic Parameters:

The first edition of this highly regarded text was published in 1972 to fill a void in the literature between the technical aspects of catheterization and the interpretation of processed data for clinical application. In the third edition, the authors provide up-to-date biophysical concepts and mathematical formulae necessary for the understanding and processing of raw data collected through this procedure.
