We bought a few other geography items as well to supplement his education at home. This book is easy to understand and offers great illustrations to help explain the vocabulary word. You have words such as, Atoll, Ford, Palisade, River, Swamp, Tundra, and Waterfall. Each word has its own picture to make the explanations easy to digest. The text is short - about 2-3 sentences for each feature described. I would recommend this book as a nice geography picture book for children probably from about ages 4-8 (the book states from ages 7-10 but it seems geared towards younger children in my opinion). Happy learning!!! 1 of 1 people found the following review helpful. Great education fun By Dog Daze My 7 year old came home from school with a note he had written. He wrote

the title and author's name on paper. His teacher had this book and he wanted to make a book similar to it out of paper. Great way to read, learn and be creative. Pictures are bright and colorful in this book. He likes this very much. I had rented this book from our local library and pictures were dull. He immediately asked me to make sure i bought him a book with bright pics. This book will be used for a long time.12 of 12 people found the following review helpful. Great geography book for the classroomBy HunterTI have used this book in the classroom for many years. My first through third grade students use it a lot. They are able to independently look up land and water forms in order to identify the different ones for a project I have in my classroom.The book is missing a few definitions, but I have made my own and added them to the book.(ex. ria ). The other thing is the index is not complete, but I wrote in the correct pages and topics. It is missing a few of the definitions. It is a great introduction to using an index. While not perfect, it is a very useful and young students are able to use it independently...a huge benefit. I wish more books were that way. It is difficult to find a book at the right level with the information you want. As a culminating project the students make an "imaginary island". They use the book to create a "map" showing many different land and water forms. They get creative with the names...for example, Barbara's Bay or Awesome Archipelago.I would find it hard to teach this part of geography without it!! It is an excellent resource.
