**Sheila Danzig, Francis Mutulu : Great Careers in 2 Years** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Great Careers in 2 Years:

Great Careers In Two Years Maybe you are thinking that the well-paying jobs only go to people with an advanced graduate degree from one of the better-known universities - think again, because are these jobs such well-paying

attractions with so many graduates still not earning sufficient money to pay for their student loans. The labor market is clamoring for a continuing stream of skilled and educated people to fulfill its demands, and is willing to pay for the right people. A two-year degree course from your local community college is no longer seen as a second-class choice in the job market, even when it comes to the well-paying jobs - and the student loans are minimal when compared with the four- and six-year courses. Authors Sheila Danzig and Francis Mutulu in their book *Great Careers In Two Years*, take you through the steps involved in a two-year associate degree course, then go on to identify careers that are available to these course graduates - careers starting at \$50,000 per year. Surprising, but easily attainable, and without the hefty student loans eating away at your future income. In language aimed at students and their parents, the authors have filled their book with advice and tips, loopholes and pitfalls, with ample contact details to help you on your way to those well-paying jobs. Delve inside and you can find a wealth of useful and proven information to give you a jump-start to your career path - and you may be pleasantly surprised to discover the route in which your career can be heading. Looking for the inside information - you can find the secrets inside *Great Careers In Two Years* by Sheila Danzig and Francis Mutulu.
