**Laurel Jizba : Guidelines for Bibliographic Description of Interactive Multimedia** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Guidelines for Bibliographic Description of Interactive Multimedia:

Addressing items not included in the AACR2, these guidelines were created in response to demand by cataloguers for separate, practical instructions on cataloguing interactive multimedia resources, which have become crucial in library collections. These guidelines were reviewed by more than 300 cataloguers. The compilers also developed the guidelines to remain in compliance with the principles and provisions of AACR2, in so far as the complications of media integration in interactive multimedia resources allow compliance.

From Library JournalThis clear, concise guide addresses the practical requirements of cataloging interactive multimedia acquired by libraries. Questions of determining whether the item is interactive multimedia are raised, with appropriate answers provided. Each field in order of the bibliographic description is discussed systematically, with excellent cross references to AACR2R (Anglo-American Cataloging Rules, 2d ed. revised) defining the rationale for the format. This is an essential tool for catalogers, regardless of the card catalog's environment. Descriptive cataloging and MARC-tagged examples are included. The glossary of terminology and the annotated bibliography are current and easy to understand. Highly recommended.Patricia Kelly, Deer-field Acad. Lib., Mass.Copyright 1994 Reed Business
