**Natalie L. Sproull : Handbook of Research Methods: A Guide for Practitioners and Students in the Social Sciences** before purchasing it in order to gage whether or not it would be worth my time, and all praised Handbook of Research Methods: A Guide for Practitioners and Students in the Social Sciences:

1 of 1 people found the following review helpful. Recommended for research methods  
By chelicera  
I work for the GAO. This book was recommended to me as a reference by one of our Applied Research Methods guys. It's been a good reference for identifying criteria in program evaluation.  
0 of 2 people found the following review helpful. book ok, seller great  
By Pandora76p  
The book's write-up doesn't accurately describe the product. In writing my dissertation I need significant volumes of technical data and research to support every element of the dissertation including the methods selected for the research process. This book was supposed to walk through the process and give lots of advice. It doesn't really do that, but it does give some information that is helpful so that I got it used for under \$5 makes that value ok. The condition of the book was very good - no staining, no marks/highlights, no bent pages. My only complaint would be that due to the age of the book and the fact that it seems to have never been opened, the binding glue had dried out so on using it the first time the binding loosened considerably. The shipping of the book was excellent - it was shipped almost before I hit the checkout button, and it arrived before I even had a chance to wonder where it was and track it. Great job!  
5 of 5 people found the following review helpful. A Heaven sent resource  
By J. Harris  
I have found Sproull's book to be of great help in understanding and following the steps in the research process. I use it as a reference against other manuals of the social science research nature. I recommend this book to everyone who does research, of any nature, or who is studying the research process.

Designed for researchers, managers, and administrators who make research-based decisions, as well as students of the social sciences and business. The entire research process, from variables to final report, is covered step by step.

About the Author  
Natalie L. Sproull is Professor of Management at Western Illinois University.
