Very useful, straightforward, systematic exposition/overview of information that could save your life.By Customer"Holding Your Ground" is a well written, generally clear, straightforward, and useful survey of a primarily defensive/passive strategies and techniques that could well save your life, if things should all fall apart; a formerly unthinkable scenario that is, in my opinion, becoming less "unthinkable" by the day. Moreover, many of the steps "Joe Nobody" recommends could be relatively easily accomplished and are not very expensive.Written from an obvious military perspective, this book covers many fundamental considerations, starting with not only a systematic survey of the strengths and weaknesses of the place to be defended, but also with an honest appraisal of the attitudes potential defenders would bring to this dire situation i.e. at its most basic level, could you

pick up a gun and shoot someone who was intent on robbing or killing you and yours. It then proceeds to very systematically outline various defensive strategies, techniques, and in the smaller offensive section, to list a few of the types of weapons and the basic equipment that would help you to "hold your ground." I particularly liked his ideas for "hiding in plain sight," camouflaging your location and/or making it appear to be burnt out, abandoned, and/or already looted, and several creative ideas for using camouflage netting inside a structure, including hanging it across windows and tightly covering doors with it to make any attempted entry by attackers much more difficult, thus giving defenders much more time to react. There are many very clear drawings/illustrations that help to show what he is trying to teach but, unfortunately, on the other hand, the pictures used in this work are almost uniformly out of focus and muddy--making it very hard to even see what he is attempting to illustrate. A minor criticism is that several times in this book the author refers to the "red arrows" that are supposed to be in illustrations, when the whole book is printed in black and white only i.e. no red or any other color arrows. I highly recommend this book to get you thinking very defensively and thinking in ways and about things that you probably do not currently think about. Our days of living off the surpluses created by past generations, of peace and plenty, and a hazy disconnect from reality, look like they are coming to an end folks, and perhaps a very abrupt one. So, time to "listen up" and prepare, to be the ant and not the grasshopper. Finally, the author often writes that there are many military manuals or other publications that give more detailed information on this or that subject which he is just outlining. One thing that I believe would have greatly increased the usefulness of this book would have been a select bibliography of several of the key military manuals and other publications that he was referring to. 2 of 2 people found the following review helpful. Needs Work By R. Pinch This book is very poorly put together. It is an apparent knock off of a different print. For example, the text will refer to colored arrows in the diagrams and the book contains no color. Spelling and grammar are poor in many areas. Terribly distracting and sometimes misleading. The content is not always cohesive. In some areas the 'author' has put in some thought, while in others 'he' is just printing some poorly thought out opinions. Some of his plans are based on infrastructure and services that are not likely to be found if "it all falls apart". I did learn some valuable tips and read some interesting approaches, but overall I think the content was much too amateur. I expected something a LOT more refined and much more cohesive in thought. 34 of 36 people found the following review helpful. Informative Book By Woodlandtrails This book made me reevaluate how I look at my home and I WISH I had read it BEFORE my home was renovated. A planned bedroom move at the front of the house to the back of the house is still on but after reading this book, the new windows at the front of the house will no longer be large white casement windows. Instead, they will be two rows of NARROW HIGH DARK windows running across the front which OPEN IN (so people outside cannot tell the windows are open from the outside) to let in ventilation/breeze but are also too small and high for someone to climb in. On the house plans, they look quite modern and leave a lot of wall space in the new living room area which is great. I plan to build a bookcase against that wall seen in a magazine that is also a ladder but doesn't look like one so if someone wants to look outside, go for it. I found venting round windows (any size I want or color or heat/cold value, whatever) on a Chinese website and I was thinking of buying a few very small round peep hole windows which open by turning (They don't open inside or outside) but actually spin open so half the window is venting when open so people can look out. I had french doors put in before I read this book and they are being removed now. Too easy to break into and in storms, too easy to blow in. The checklist is great also. Worth the cost of the book by itself.

HOLDING YOUR GROUND is an instructional guide and planning tool that addresses defensive preparation of a location. If the government can no longer protect your home, farm or property, HOLDING will teach you how. HOLDING covers virtually every aspect of protecting you and your family in the event society breaks down. Many people have preparations for food, water, shelter and personal defense. HOLDING will teach you how to configure your home, train your team, and properly equip any location for defense. Covering topics ranging from hiding in plain sight to pre-positioning of supplies, HOLDING uses common sense, military tactics and historical examples that allow you to prepare for defense without affecting your property's value or appearance.

It comes very highly recommended... paratusfamiliablog.com From the Author HOLDING YOUR GROUND is written for people who prepare for a time when two critical situations become reality: 1. The Government no longer provides security, such as the police, either locally or nationally. 2. There is a disruption in the food supply. The reason

or cause really doesn't matter. It could be natural disasters, economic collapse, social upheaval, EMP attack, pandemic, or any other doomsday scenario you can think of. If Law Enforcement is no longer there and people are hungry, ugly things can happen. We Preppers are normally peaceful people who simply want to grow our food, raise our children and perhaps contribute to the re-building of our society should such events occur. Unfortunately, not everyone prepares, and that means there may be haves and have not's. Every society has some economic division of its people and for the most part, they co-exist without issue. When it comes to FOOD, the chances of a peaceful existence between those who have and those who don't is low. We live in a free, well-armed society, and that means if trouble does erupt - it will probably be violent. HOLDING uses several military terms and concepts and these can be intimidating for some people. Fortunately for our society, our military and law enforcement have handled the "dirty work" of protecting us for hundreds of years. Since we are planning for a world where they will no longer provide that security, we need to learn some of their skills. They have established a very specific terminology to teach these skills, and it works. While I could not justify reinventing their "educational wheel," a serious attempt is made to communicate in "laymen's" terms wherever practical. All of us may need to think a little more than like a soldier or policeman. If you are "a little past your prime," HOLDING can help you "hide in plain sight" and avoid trouble whenever possible. I, personally, fall into this category and while I could still put up a good fight, combat is for younger men. HOLDING can teach you how to set up your location (Bug Out or In) so that you can have the best chance of surviving even the worst situations. If you are part of a "young family," HOLDING will provide you with several ideas to assist you with your plan and the options available to you. A TEOTEAWKI life with younger children is a completely different situation than an all-adult group. The potential issues regarding those precious young ones are considered throughout. If you are part of a large, geographically close family or group, HOLDING will provide valuable information on how to utilize your team's size and capabilities. Regardless of your age, the size of your group, where you are located and what your physical capabilities are - HOLDING can teach you certain basics that may make the difference if it all falls apart. Joe Nobody From the Inside Flap A word about the American Flag on the cover: An inverted flag, according to the Flag Code, is a sign of distress or endangered property. Given the subject matter of the book, the author felt it appropriate to display the blue field of honor to the right. It is interesting to note that aircraft and soldiers always display the flag with the blue field toward the front, or the place of honor. All of the staff associated with this book are patriots and love the U.S.A. Many have served to defend her, and would never offend our flag.
